

Range 2015-16

Made in New Zealand

Push Socks is a registered trade mark of The Kiwi Sock Company Limited. In recent times we have invested in new technology so that we can make socks that have world class features, we have combined the technical aspects with high quality yarns to ensure that these socks are as good as they can be.

Below we have explained what these features mean.

All our socks feature a fine Elastane thread throughout the whole sock, this keeps the sock firmly on your foot without any pressure points, your socks won't go baggy and will be nice and supportive again after washing.

Low tension top.

All socks need elastic to help them stay in place. We place this over a wide area to help prevent pressure points.

Anti bunch.

This area is designed not to bunch up around the ankle when your ankle extends forward.

Arch Support.

Elastic inserted into arch
Keeping sock from slipping
On foot as well as providing
Support to arch.

Reinforcing and Anti Blister.

We add nylon to the outside of the sock for durability and allow the sock to move against your shoe helping to prevent blisters.

Linked toe seam.

New technology means no more uncomfortable seams in toe area.

Left and Right fitting.

Our sport sock feature toes shaped to the left or the right.
